

The Atellica CI Analyzer addresses big challenges—all in a compact 1.9 m² footprint

The technology, reagents, consumables, and user interface found in high-volume labs, now in a smaller footprint

siemens-healthineers.com/atellica-ci-analyzer

The enormity of the challenges you face in the lab to deliver quality testing—quickly, consistently, and accurately—day after day, is constant. The Atellica® CI Analyzer is a low- to mid-volume chemistry and immunoassay analyzer specifically designed to address staff shortages and burnout, make patient care more predictable, and help empower you to be more agile in today's changing world—all critical aspects in today's evolving healthcare landscape.

You can scale capabilities where and when you need them.

Measuring 1.9 m², the Atellica CI Analyzer is specifically designed to help make your day better, more predictable and secure.

The Atellica CI Analyzer uses the same technology, reagents, consumables, and intelligent software as our flagship Atellica Solution, standardizing inventory and workflows and ensuring clinical equivalence across your network.
